El ction/Restriction

1. Restriction to one of the following inventions is required under 35 U.S.C. 121:
 - I. Claims 1-22 and 28-49, drawn to a pressure sensor , classified in class 73, subclass 715.
 - II. Claims 23-27, drawn to a method of manufacturing a sensor, classified in class 29, subclass 832.
 - III. Claims 50-71, drawn to a combustion engine, classified in class 73, subclass 35.13.

The inventions are distinct, each from the other because of the following reasons:

Inventions Groups I and II are related as process of making and product made.

The inventions are distinct if either or both of the following can be shown: (1) that the process as claimed can be used to make other and materially different product or (2) that the product as claimed can be made by another and materially different process (MPEP § 806.05(f)). In the instant case the product as claimed can be made by a materially different process such as welding.

Inventions of Group I and Group III are related as combination and subcombination. Inventions in this relationship are distinct if it can be shown that (1) the combination as claimed does not require the particulars of the subcombination as claimed for patentability, and (2) that the subcombination has utility by itself or in other combinations (MPEP § 806.05(c)). In the instant case, the combination as claimed does not require the particulars of the subcombination as claimed because pressure

sensor does not require welding a diaphragm structure. The subcombination has separate utility such as welding.

A telephone call was made to request an oral election to the above restriction requirement, but did not result in an election being made.

Applicant is advised that the reply to this requirement to be complete must include an election of the invention to be examined even though the requirement be traversed (37 CFR 1.143).
